Equivalent equations are equations that have identical solutions. Thus,  $3x + 3 = x + 13$ ,  $3x = x + 10$ ,  $2x = 10$ , and  $x = 5$ . are equivalent equations, because 5 is the only solution of each of them. Notice in the equation  $3x + 3 = x + 13$ , the solution 5 is not evident by inspection but in the equation  $x = 5$ , the solution 5 is evident by inspection.

Section 4.8 D'Alembert solution of the wave equation. Note: 1 lecture, different from §9.6 in , part of §10.7 in . We have solved the wave equation by using Fourier series. But it is often more convenient to use the so-called d'Alembert solution to the wave equation 1 .While this solution can be derived using Fourier series as well, it is really an awkward use of those concepts.

## **Elementary Differential Equations Rainville Solutions ...**

An equation may be solved either numerically or symbolically. Solving an equation numerically means that only numbers are admitted as solutions. Solving an equation symbolically means that expressions can be used for representing the solutions.. For example, the equation  $x + y = 2x - 1$  is solved for the unknown  $x$  by the expression  $x = y + 1$ , because substituting  $y + 1$  for  $x$  in the equation ...

Linear Equations: Solutions Using Determinants with Three Variables. The determinant of a  $2 \times 2$  matrix is defined as follows: The determinant of a  $3 \times 3$  matrix can be defined as shown in the following. Each minor determinant is obtained by crossing out the first column and one row.

Ordinary differential equations frequently occur as mathematical models in many branches of science, engineering and economy. Unfortunately it is seldom that these equations have solutions that can be expressed in closed form, so it is common to seek approximate solutions by means of numerical methods; nowadays
