Since the mid-1990s, the emergence of hydrogen economy and the speed with which it will arrive have been vigorously debated. As a disruptive technology, dominant designs for the production, storage and distribution of hydrogen have not yet been established. Not have performance characteristics been achieved to compete with the existing combustion engine, though the efficiency and durability of hydrogen fuel cells are improving. This publication highlights the uncertainties involved in making choices about hydrogen and fuel cells in planning the development policies on national energy, environment and transport sector.

On 9 January 2012, after a lengthy two-year trial, Anwar Ibrahim was acquitted of charges of sodomy against his 23-year-old aide, Mohd Saiful. The acquittal was a shock not only to Anwar - who expected to go to jail - but to most international observers who were convinced he would be found guilty. This book recounts both the first sodomy episode (1998-2004) and the Sodomy II trial (2008-2012). It then takes up the story after the acquittal, describing the events that led to the Malaysian Court of Appeal overturning the ruling in March 2014 - convicting Anwar of the charge and sentencing him to five years' imprisonment - the final appeal against the conviction in the Federal Court of Malaysia In October 2014, and the guilty verdict that was finally delivered on 10 February 2015. Anwar is now in prison serving a five-year sentence. The 2014 conviction ruled him out of contesting a by-election for the parliamentary state seat of Kajang and plans to become the chief minister of Selangor. At the same time his lawyer, Karpal Singh, was convicted of sedition, which disqualified him from parliament. Together, these events were seen as an attack on the key leaders of the opposition parties

Aline Leon ? In the last years, public attention was increasingly shifted by the media and world governmentsto the conceptsof saving energy, reducingpollution, protectingthe - vironment, and developing long-term energy supply solutions. In parallel, research funding relating to alternative fuels and energy carriers is increasing on both - tional and international levels. Why has future energy supply become such a matter of concern? The reasons are the problems created by the world's current energy supply s- tem which is mainly based on fossil fuels. In fact, the energystored in hydrocarb- based solid, liquid, and gaseous fuels was, is, and will be widely consumed for internal combustion engine-based transportation, for electricity and heat generation in residential and industrial sectors, and for the production of fertilizers in agric- ture, as it is convenient, abundant, and cheap. However, such a widespread use of fossil fuels by a constantly growing world population (from 2. 3 billion in 1939 to 6. 5 billion in 2006) gives rise to the two problems of oil supply and environmental degradation. The problemrelated to oil supply is caused by the fact that fossil fuels are not - newable primary energy sources: This means that since the rst barrel of petroleum has been pumped out from the ground, we have been exhausting a heritage given by nature.
